CV of leaf disc LMA

$R^2 = 0.32$  ,  $N = 311$

A scatter plot showing the relationship between the coefficient of variation (CV) of whole-leaf LMA (y-axis) and the CV of leaf disc LMA (x-axis). Both axes are on a logarithmic scale. The x-axis ranges from 0.001 to 0.2, with major ticks at 0.001, 0.010, 0.050, and 0.100. The y-axis ranges from 0.001 to 0.2, with major ticks at 0.001, 0.010, 0.050, and 0.100. The plot contains numerous black circular data points. A solid blue line represents the linear regression, and a dashed black line represents the 1:1 relationship. A light gray shaded area around the blue line indicates the confidence interval. The data points are widely scattered around the regression line, indicating a weak to moderate correlation.
